

## BARRIER® M UV SYSTEMS

### WALLACE & TIERNAN® UV DISINFECTION SYSTEMS

The Barrier® M range of UV systems is primarily designed for the treatment of water with flow rates ranging from 10 to 1150 m<sup>3</sup>/h (44 to 5000 US gpm). It is equipped with Wallace & Tiernan® medium-pressure lamps, type WTL and electrical ballasts. The wide emission spectrum of the lamps, ranging from 200 to 300 nm, attacks the nucleic acid (DNA), cell wall, proteins and enzymes of waterborne pathogens. Such attacks not only inactivate the microorganism by preventing the replication of its DNA, but also destroy its repair mechanisms. A wide range of DVGW certified systems is available. The Barrier® M reaction chamber is characterized by optimal hydraulics and low pressure loss, ensuring a high efficiency of the UV system.

#### Applications

- Potable water
- Swimming pools, including chloramines reduction and disinfection
- Industrial process and wastewater, e.g. food & beverage, pharmaceutical, and fish hatcheries
- Small and medium size wastewater plants

#### Standard Features

- Optimized operation through stepless lamp power control
- Absolute calibrated UV sensor for optimal performance control
- Hydrodynamically optimized chamber design
- Simple, easy-to-use user interface
- Reaction chamber made of stainless steel AISI 316L, particular systems made of 318 LN for seawater available

#### Key Benefits

- Low operation costs and low head loss through low number of powerful medium-pressure lamps
- Extended lamp life and energy efficient operation through accurate lamp power control
- Low installation costs through space saving design and small footprint, easy installation and retrofit with in-line design
- Wide UV spectrum leads to effective treatment of photoreactivation
- Low life cycle costs with hydrodynamically optimized chamber design

#### Optional Features

- Manual or automatic cleaning system (automatic for Barrier® M 80 system or larger)
- DVGW certification for Barrier® M 275, 525, 900, 1250, 2600 and 3800 systems
- Chemical cleaning system

## TECHNICAL DATA

1 Capacity at a UV dose of 400 J/m<sup>2</sup>, end of lamp life, at the specified UV transmittance, and based on the multiple point source summation method

2 Capacity at a UV dose of 600 J/m<sup>2</sup>, end of lamp life, and a UV transmittance (254 nm; 1 cm cell) of 95 %

3 Total average power consumption over 9000 h based on constant flow rate, UV transmittance and UV dose as used for the selection of this system (unless specified different)

4 A x H x L: Assembly dimension x height x length

5 Also available in DVGW certified execution; please consult factory or individual datasheet for biosimmetrical certified capacities (DVGW - Internationally recognized authority on certification of UV disinfection systems. DVGW - German Technical and Scientific Association for Gas and Water)

6 When sized for chloramines reduction, this unit will achieve 4 logs inactivation of most waterborne pathogens (bacteria, viruses, protozoa)

7 Wall mounted

Auf der Weide 10, 89312 Günzburg, Germany
